PROFESSIONAL SUMMARY

I'm a cloud engineer who enjoys designing systems and building the infrastructure that makes them work. I have four years in engineering across banking, retail, manufacturing and automotive. At Darwinbox, my reusable Python libraries cut client go-live from 90 to 60 days across six implementations. At CFive AI, I own the migration from Railway to AWS, from architecture design through ongoing implementation and environment management. I take ownership of problems and explain trade-offs without jargon. A Monash Master of IT graduate, I'm seeking a permanent cloud engineering role in Melbourne.

SKILLS AND EXPERTISE

Cloud (AWS): Lambda · API Gateway · ECS · EventBridge · SQS · SNS · DynamoDB · S3 · IAM · VPC · KMS · CloudWatch · CloudTrail · Cognito · Serverless and event-driven architecture · AWS migration

Infrastructure and DevOps: Terraform · Docker · GitHub Actions · CI/CD · Git · Production troubleshooting and root cause analysis

Integration: REST APIs · Webhooks · Apache Kafka (integration) · SFTP and file-based transfer · JSON · XML · OAuth 2.0 · SSO (Microsoft Entra ID / Azure AD, Google Workspace, Active Directory) · Data mapping

Data: SQL · ETL · PostgreSQL · Amazon Redshift · Power BI

Languages: Python · SQL · R

Delivery and consulting: Technical discovery · Requirements workshops · Integration solution design · Stakeholder management · Cross-functional collaboration · Agile · Jira / Confluence · AI-assisted development (Claude Code)

PROFESSIONAL EXPERIENCE

Cloud Engineer | CFive AI

Mar 2026 - Present

Melbourne, VIC · AI voice receptionist platform for car dealerships and small businesses, built on Twilio telephony, VAPI voice agents and CRM integrations.

- **Owning the end to end migration from Railway to AWS**, from architecture design through ongoing implementation and environment management **to support SOC 2 and ISO 27001 readiness**.
- **Designed separate API Gateway and ECS workloads** for live call handling and the **internal dashboard to isolate deployment failures**, with encryption, monitoring and audit logging.
- **Maintained 99.9% platform uptime** across Twilio telephony, VAPI voice agents and CRM integrations supporting approximately **500 calls daily, diagnosing production failures** and resolving integration issues.
- Enabled an estimated **\$6.5M in annual service booking value for dealerships** by integrating the AI voice platform with Fusion AMS Pro, automatically capturing after-hours bookings directly in dealership systems.
- Rebuilt the bidirectional SFTP integration with GoHighLevel on the platform's own servers, with error handling and logging and entirely eliminated the need for a paid Zapier subscription bringing costs down to zero.

Software Engineer → Senior Software Engineer | Darwinbox

Feb 2021 - Jul 2024

Jakarta, Indonesia · Enterprise HR and payroll SaaS used by 700+ companies across Southeast Asia, delivering integrations for banking, retail and manufacturing clients.

- Cut go-live from **90 days to 60 across six implementations** of Darwinbox's HR and payroll platform by building reusable Python REST API libraries and field-mapping templates for SAP, Oracle and bank payroll data, **adopted by the entire backend team**.

- Built a scheduled Power BI dashboard on Amazon Redshift data that replaced 40 manual report downloads before every quarterly business review saving **around 500 working days a year, the equivalent of two full-time staff**, across 50 account managers and **130+ enterprise clients**.
- Cut Security Bank's sync of **30,000 employee and payroll records** from running around the clock to **under an hour a day** by replacing an Apache Kafka feed with a webhook that sent only the changes, keeping HR and payroll data complete and on time.
- Delivered payroll and HR data **on time every pay cycle** for clients in **four countries** by building REST API, webhook and SFTP integrations with a Python layer that re-runs safely after failures, keeping payroll on schedule with nothing re-keyed by hand.
- Secured payroll access for **workforces of up to 40,000 employees** by integrating single sign-on with Microsoft Entra ID, **Google Workspace and Active Directory**, letting staff use their existing work login and cutting off leavers the moment they left.

PROJECTS

ShieldWalk: Women's Safety Navigation App | github.com/coded-by-aditya/FIT5120-TE10-ShieldWalk

- Gave a woman walking home at night a **live check on her route** rather than a static map. I built the **AWS backend** for a navigation app that detects in real time when a walker leaves the planned route, pushes turn-by-turn corrections and confirms arrival.
- Avoided an estimated 20 hours of repeated manual setup over three months by using Terraform to provision 15 Lambda functions and API endpoints across development, staging and production, reusing the configuration through two AWS account changes.

BirdTag: Serverless Media Tagging Platform | github.com/coded-by-aditya/birdtag-aws

- Let someone following one bird species **get an email the moment new matching media arrives**, instead of searching for it. I built the platform serverless on **Lambda, API Gateway and DynamoDB**, with **Cognito** for sign-in, **S3 pre-signed URLs** for delivery and the media processor in **Docker**.

MOSAIC: Serverless Chatbot API | *Monash volunteer engineering*

- Let returning users of a community chatbot pick up where they left off, by keeping each user's **conversation context for 24 hours**. I built and deployed the chatbot API serverless on **API Gateway, Lambda and DynamoDB** with the Gemini API, for a Monash student group building AI tools for community organisations.

EDUCATION

Monash University, Master of Information Technology · Melbourne
WAM 82% · GPA 3.68/4

Jul 2024 - Jul 2026

Manipal Institute of Technology, Bachelor of Technology, Information Technology · India

2021
