

ADITYA MEHROTRA

Melbourne, Australia | +61 478 916 329 | mehrotra.aditya16@outlook.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Backend and integration engineer with 3+ years building API-driven systems and working directly with enterprise clients. Uses AI tools like Claude Code and prompt engineering as a normal part of day-to-day work. Strong in Python, AWS serverless, and Terraform. Cut production downtime 20%, held 95% integration accuracy, and delivered across 130+ client environments.

CORE SKILLS

Languages & Engineering: Python | JavaScript | SQL | REST API design | OAuth 2.0 / SSO
AI & LLM Tooling: Claude Code | Prompt Engineering | LLM integration | AI telephony (Twilio, VAPI)
Cloud & Data: AWS (Lambda, API Gateway, DynamoDB, S3, Cognito, IAM, SNS) | ETL & data pipelines | PostgreSQL / RDS | Serverless
IaC & DevOps: Terraform | GitHub Actions CI/CD | OIDC | Docker | Git / GitHub

PROFESSIONAL EXPERIENCE

CFive AI – Melbourne, Australia

Mar 2026 – Present

Technical Engineer (Contract)

AI telephony startup building an intelligent voice receptionist platform for SMBs, integrating Twilio, VAPI, and CRM APIs.

- Leading the migration of CFive's platform to AWS, scoping the target cloud architecture and moving core services off the existing system
- Worked closely with a small team on an early-stage product, diagnosing and fixing production failures in an AI telephony system (Twilio, VAPI, CRM APIs) across 24 live client environments
- Wrote and tuned the prompts behind an AI voice receptionist, improving response accuracy and cutting down mishandled calls across client deployments

MOSAIC (Monash Students for AI with Communities) – Melbourne, Australia

Apr 2025 – Present

Cloud Engineer (Volunteer)

Student-run organisation at Monash University building AI-powered tools for community impact.

- Deployed a serverless chat API using AWS API Gateway, Lambda, and DynamoDB (with TTL and GSI), provisioned end-to-end via CloudFormation with scoped IAM roles
- Created an interactive Mapbox GL map with real-time GeoJSON injection, parsing CSV data into country-level markers with hover and click interaction

Darwinbox – Jakarta, Indonesia

Feb 2021 – Jul 2024

Senior Integration Engineer / Integration Engineer

Enterprise HR and payroll SaaS platform serving 700+ companies across Southeast Asia, with deep integrations across banking, retail, and manufacturing sectors.

- Designed and delivered REST API and ETL integrations using Python and R for enterprise clients across banking, automotive, retail, and sustainability sectors
- Cut integration-related system downtime by 20% and achieved 95% integration accuracy through rigorous API testing and systematic debugging
- Built payroll and HR data pipelines across Singapore, Malaysia, Philippines, and Indonesia, replacing manual processes with scheduled REST API connectors
- Delivered end-to-end implementations for 130+ clients, cutting timelines from 90 to 45 days through reusable templates and automated configuration
- Led technical enablement workshops for client engineering teams, increasing platform adoption by 75% and reducing tier-1 support volume

PROJECTS

ShieldWalk – Women’s Safety Navigation App | *Vue 3* | *AWS Lambda (x15)* | *API Gateway* | *PostgreSQL RDS* | *Terraform* | *GitHub Actions* | *Groq / Llama 3.3 70B* | *Capacitor (Android)*

- Designed a self-registering Terraform IaC system using fileset-based auto-discovery, provisioning 15 Lambda functions, API Gateway routes, and CloudWatch log groups via a single `for_each` block with fail-fast validation at plan time
- Established a GitOps CI/CD pipeline with OIDC authentication, per-developer ephemeral AWS environments via Terraform workspaces, and automatic teardown on PR merge
- Developed real-time off-route deviation detection with automatic return-path calculation, turn-by-turn push notifications, and arrival detection that chains into a post-walk reflection flow to adaptively learn user comfort preferences

BirdTag – Serverless Media Tagging Platform | *github.com/coded-by-aditya/birdtag-aws* | *AWS Lambda* | *API Gateway* | *DynamoDB* | *S3* | *SNS* | *Cognito*

- Developed a serverless media tagging system with event-driven SNS email alerts, a REST API layer with optimised DynamoDB access patterns, and user authentication via Amazon Cognito
- Designed REST API endpoints (search, update, delete) and optimised DynamoDB access patterns for fast metadata retrieval and updates
- Stored and served media files via S3 with pre-signed URLs, keeping Lambda functions stateless and file handling out of the API layer

EDUCATION

Monash University – Melbourne, Australia 2026
Master of Information Technology | *WAM: 85%*

Manipal Institute of Technology – Manipal, India 2021
Bachelor of Technology – Information Technology

Re: Forward Deployed Engineer (Req 41226), Deloitte Technology & Transformation

Dear Hiring Team,

I'm applying for the Forward Deployed Engineer role (Req 41226) in Melbourne. It caught my eye because most of my work so far has looked a lot like the job you're describing: building real software while sitting close to the people who actually use it, and increasingly doing that with AI tools in the loop.

I spent three and a half years at Darwinbox as an integration engineer, working directly with enterprise clients in banking, automotive, and retail. I built REST API and ETL integrations, set up payroll data pipelines across four countries, and ran end-to-end delivery for more than 130 clients. Along the way I cut integration downtime by about 20%, kept integration accuracy at 95%, and got a typical delivery down from 90 days to 45. A lot of that job was sitting between the engineers I was building with and the business owners paying for the result, and I ended up running enablement workshops that pushed platform adoption up 75%. I liked that part of the work more than I expected to.

Right now, I'm contracting at CFive AI, a small AI telephony startup, and the pace there is closer to what you describe: work out what's broken, build something that works, get it live. I'm now leading the move of their platform onto AWS, after spending my first months there fixing production issues across Twilio and VAPI integrations and tuning the prompts behind the AI voice receptionist itself. I use tools like Claude Code daily, mainly because they help me get through real problems faster.

My own projects run on the same stack your team does. ShieldWalk is built on a Terraform setup that spins up 15 Lambda functions from a single configuration block, with a CI/CD pipeline that uses OIDC and short-lived environments for each developer. BirdTag is a fully serverless AWS app with a REST API over DynamoDB, S3 pre-signed URLs, and Cognito for authentication.

One practical note: I'm currently applying for my 485 post-study visa, which gives three years of full working rights with no sponsorship required but can currently work full time on my student VISA as my last semester has ended. I'm also happy to travel to client sites.

I'd be glad to talk further about where I'd be useful on the team. Thanks for your time.

Sincerely,

Aditya Mehrotra
